

Uses for Quonset Huts

The modern day steel building is patterned after the World War II Quonset huts. Quonset huts were built during the war to help soldiers out in the field to have a place to stay while away at war. Quonset huts were easy to put up and take down. Civilians caught on to the idea of the Quonset hut design and they quickly became popular. The basic building design of the Quonset hut is used today for many purposes. Quonset huts have an arch design where the curved walls meet the floor. The original design of the Quonset hut made it impossible to put furniture or machinery against the walls of the building. The design of the walls of the Quonset hut was changed so that they had a 90 degree angle to solve the problem of wasted space. Steel buildings today are a take off on the military Quonset hut. The Quonset hut is the idea behind many of the steel buildings today. The modern day Quonset hut can be put together in no time. Quonset hut style airline hangers, made out of steel, were used after World War II. Quonset huts by the thousands began to be made. The huts were easily put together by hand tools. The military still uses the Quonset hut style steel buildings. These Quonset hut buildings can be used for storage as well as for office buildings. There really is no end to the different ways the Quonset huts can be used.

The durability of the Quonset hut can not be beat, even though its looks are not very attractive. In the civilian world they are used for storage and office space also. Even American farmers will sometimes use Quonset huts to store their farm equipment in, livestock feed and other things in. Some people will use small Quonset huts as a second garage to keep antique cars and motorcycle or boats in. The Quonset hut is so popular, that there are even portable plastic style ones available now too. Quonset huts are used for green houses, canopies for recreations vehicles, boat shelters, animal shelters, the list goes on and on. Quonset hut canopies are now used for boat shelter, animal shelters, green houses, etc. Metal frames and a plastic cover are used to make popular Quonset style green houses today. The shape and size on the Quonset green house, makes them really easy to heat. It is worth looking into the new style Quonset hut buildings. See here also [Quonset hut](#)
